

Copy of Tescord

Tescord is an ultra-lightweight Discord client made for low-end computers.

Why use Tescord?

Tescord strips Discord down to the essentials. It uses just a fraction of the system resources while keeping all the core features intact—so you can chat, call, and hang out without lag.

How is Tescord so efficient?

Tescord runs on a minimal version of Chromium + Electron. That means every bit of performance is focused purely on what's necessary—no bloat, no fluff.

Pros

- **Ultra Lightweight** – Uses 200x less CPU and 6x less RAM than Discord
- **Super Fast** – Launches in under a second
- **Perfect for Gaming** – Won't hog resources mid-match
- **Runs on Anything** – Even your 10-year-old laptop
- **No Bloat** – Just the core Discord experience, nothing more
- **Minimal UI** – Clean, fast, and distraction-free

Cons

No Mod Support – Tescord doesn't support BetterDiscord, vencord, or any other custom plugins

No Game Overlay – In-game chat and voice overlays aren't supported.

No Rich Presence – Games and apps won't update your Discord status.

No Background Push-to-Talk – Only works when Tescord is focused.

Statistics Table

Statistics	Discord	Tescord
Average CPU Usage	12.6%	<0.1%
Average Memory Usage	1784.3 MB	285.1 MB
Average Loading Time	2.47s	0.87s

Computer Specifications: Windows 11 – Intel i7-10700 CPU 2.90GHz – 16 GB RAM – 512 GB SSD
